TECHNICAL SKILLS

Platforms/OS: Windows | OS X | Linux
Programming: C# | Java | Objective-C | Python | HTML5 | Javascript | CSS3 | SQL
Software: Git | Android Studio | Xcode | Microsoft & Google Office Suite

PROFESSIONAL EXPERIENCE

Software Engineer • ConnectWise 2017-Present

Design, analyze, integrate, and maintain internal software tools for this business IT automation provider including front and back end development of LeadAdmin utilizing *C#, .Net, Web API, and JavaScript*. Full Technical Scope includes: *C#, .NET, Web API2, JavaScript, Node.js, SignalR, Lambda, API Gateway, and CloudFormation*.

- Proven history of meeting all deadlines and completing project deliveries in a timely and cost-effective manner including a project scheduled for elimination by senior managers. Completed project ahead of schedule for the UI Team including the product history calendar previously incomplete and also considered for elimination.
- Championed design and deployment of various tools to improve processes and contribute to revenue growth including real-time data feedback for sales representatives enabling them to process and follow up on viable sales leads. Efforts included the closing of a sales deal in record time for the company.
- Spearheaded integration of an automated marketing platform including redesign of existing tools, refactoring code, and development and implementation of real-time updates using SignalR.
- Drafted multiple lambda services deployed by CloudFormation templates.
- Ensure SLA compliance and coordinate with multidisciplinary teams to deliver continuous process improvements, integrations, and upgrades on-time and within budgetary constraints.
- Devised and established service to allow sales managers and leaders to develop time-based rules enforcing accountability and ensuring prompt responses to existing and potential business partners.

EDUCATION & PROJECTS

Bachelor of Arts in Computer Science, 2016

City University of New York, Hunter College, New York, NY

Projects: **Crowd Control, 2015** — Worked closely with a 4-member team to develop an application to monitor room occupancy vs. capacity. Leveraged *Python on Raspberry PI, Open CV Framework, and iOS/Android* mobile apps.
